DETAILED ACTION

Allowable Subject Matter

Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-11 none of the prior arts alone or in combination discloses the claimed circuit within a feedback path of a detection circuit having the structural combination of a first amplifier receiving a light intensity, a detecting circuit receiving a first signal from the first amplifier, a converter to convert the output of the detecting circuit to an offset voltage and a summing amplifier receiving the offset voltage and a signal corresponding to the light intensity and outputting a predetermined level where the output is connected to the first amplifier.

Regarding claim 12 none of the prior arts alone or in combination discloses the claimed method of a detection circuit having the steps of an analog to digital light intensity, detecting a reference level of the light intensity, converting the output of the detecting circuit to an offset voltage and summing the offset voltage and a signal corresponding to the light intensity and outputting a predetermined level where the output is connected to the analog to digital converter.

The closest reference Anderson (PN 5,867,514) was applied as a double patenting and applicant submitted a terminal disclaimer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
